A photograph of a classroom with students seated at desks, facing a large screen at the front. Two people are standing near the screen. A large red semi-transparent overlay is centered over the image, containing white text. The text reads "Brainstorming !" followed by "Thinking to the past and future".

# Brainstorming !

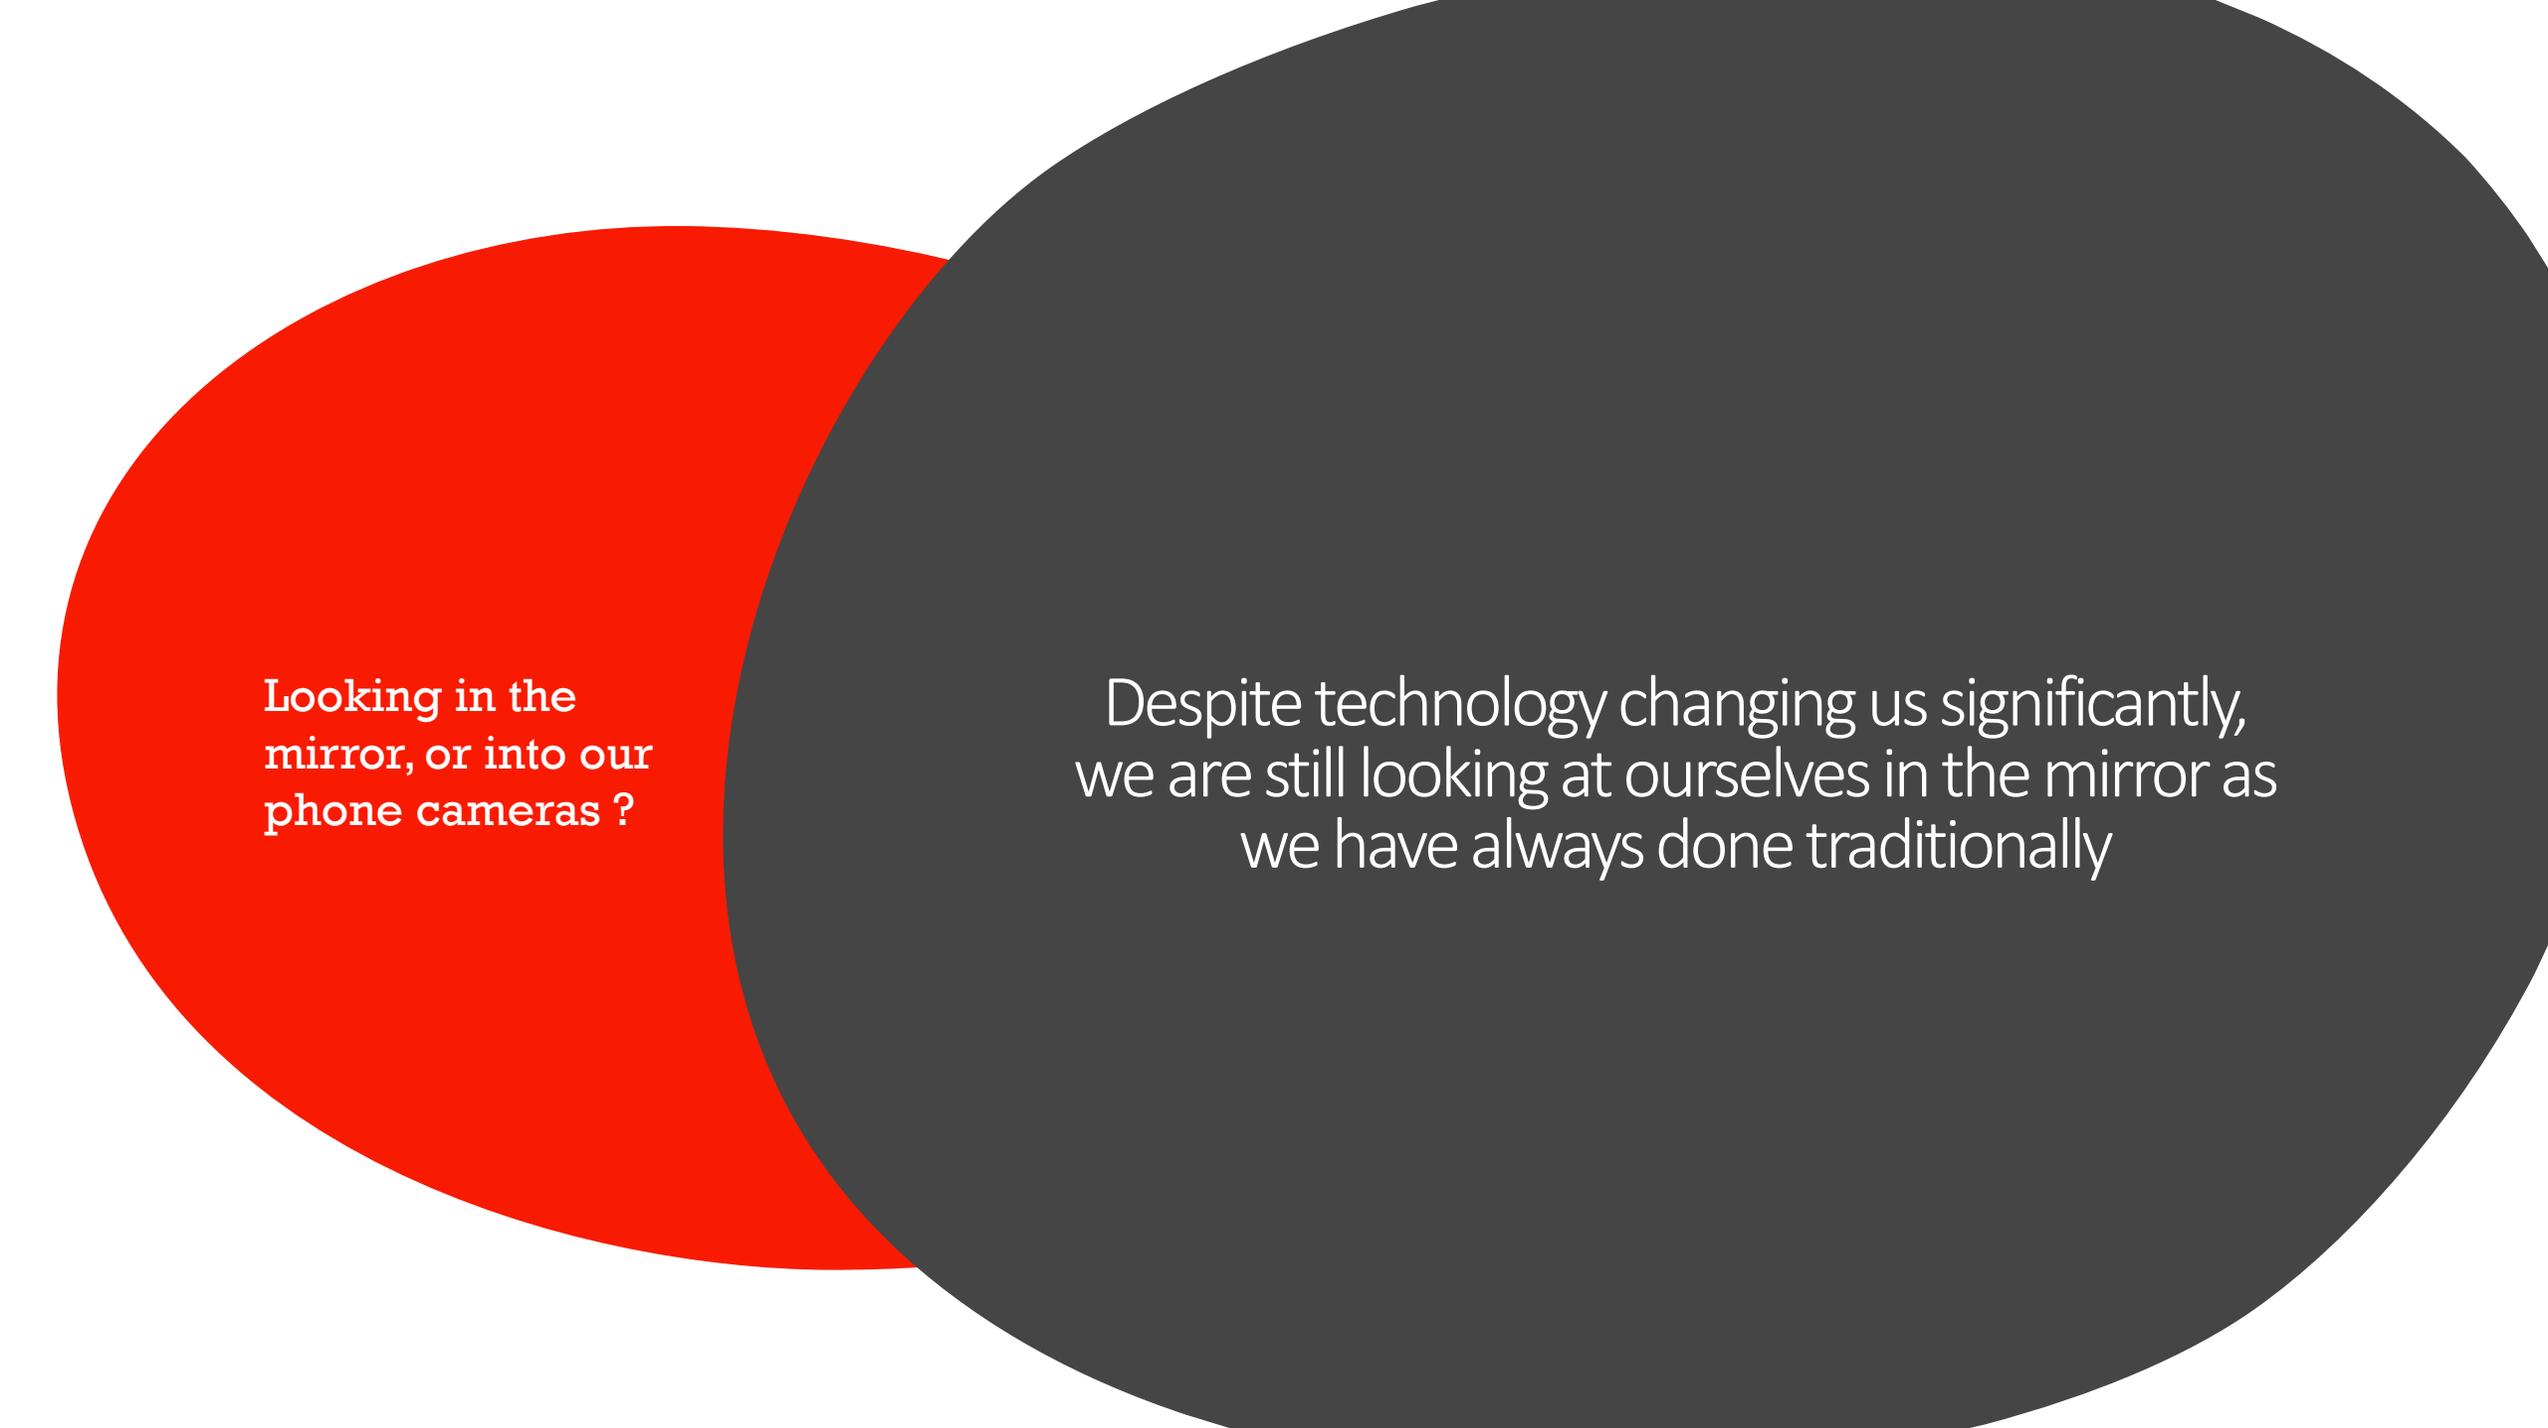

Thinking to the past and future

# Education 20 years ago

- We consider education was more traditional, as the teacher was the center of the class and it was more strict.
- There was less technology, but the still had some technology.

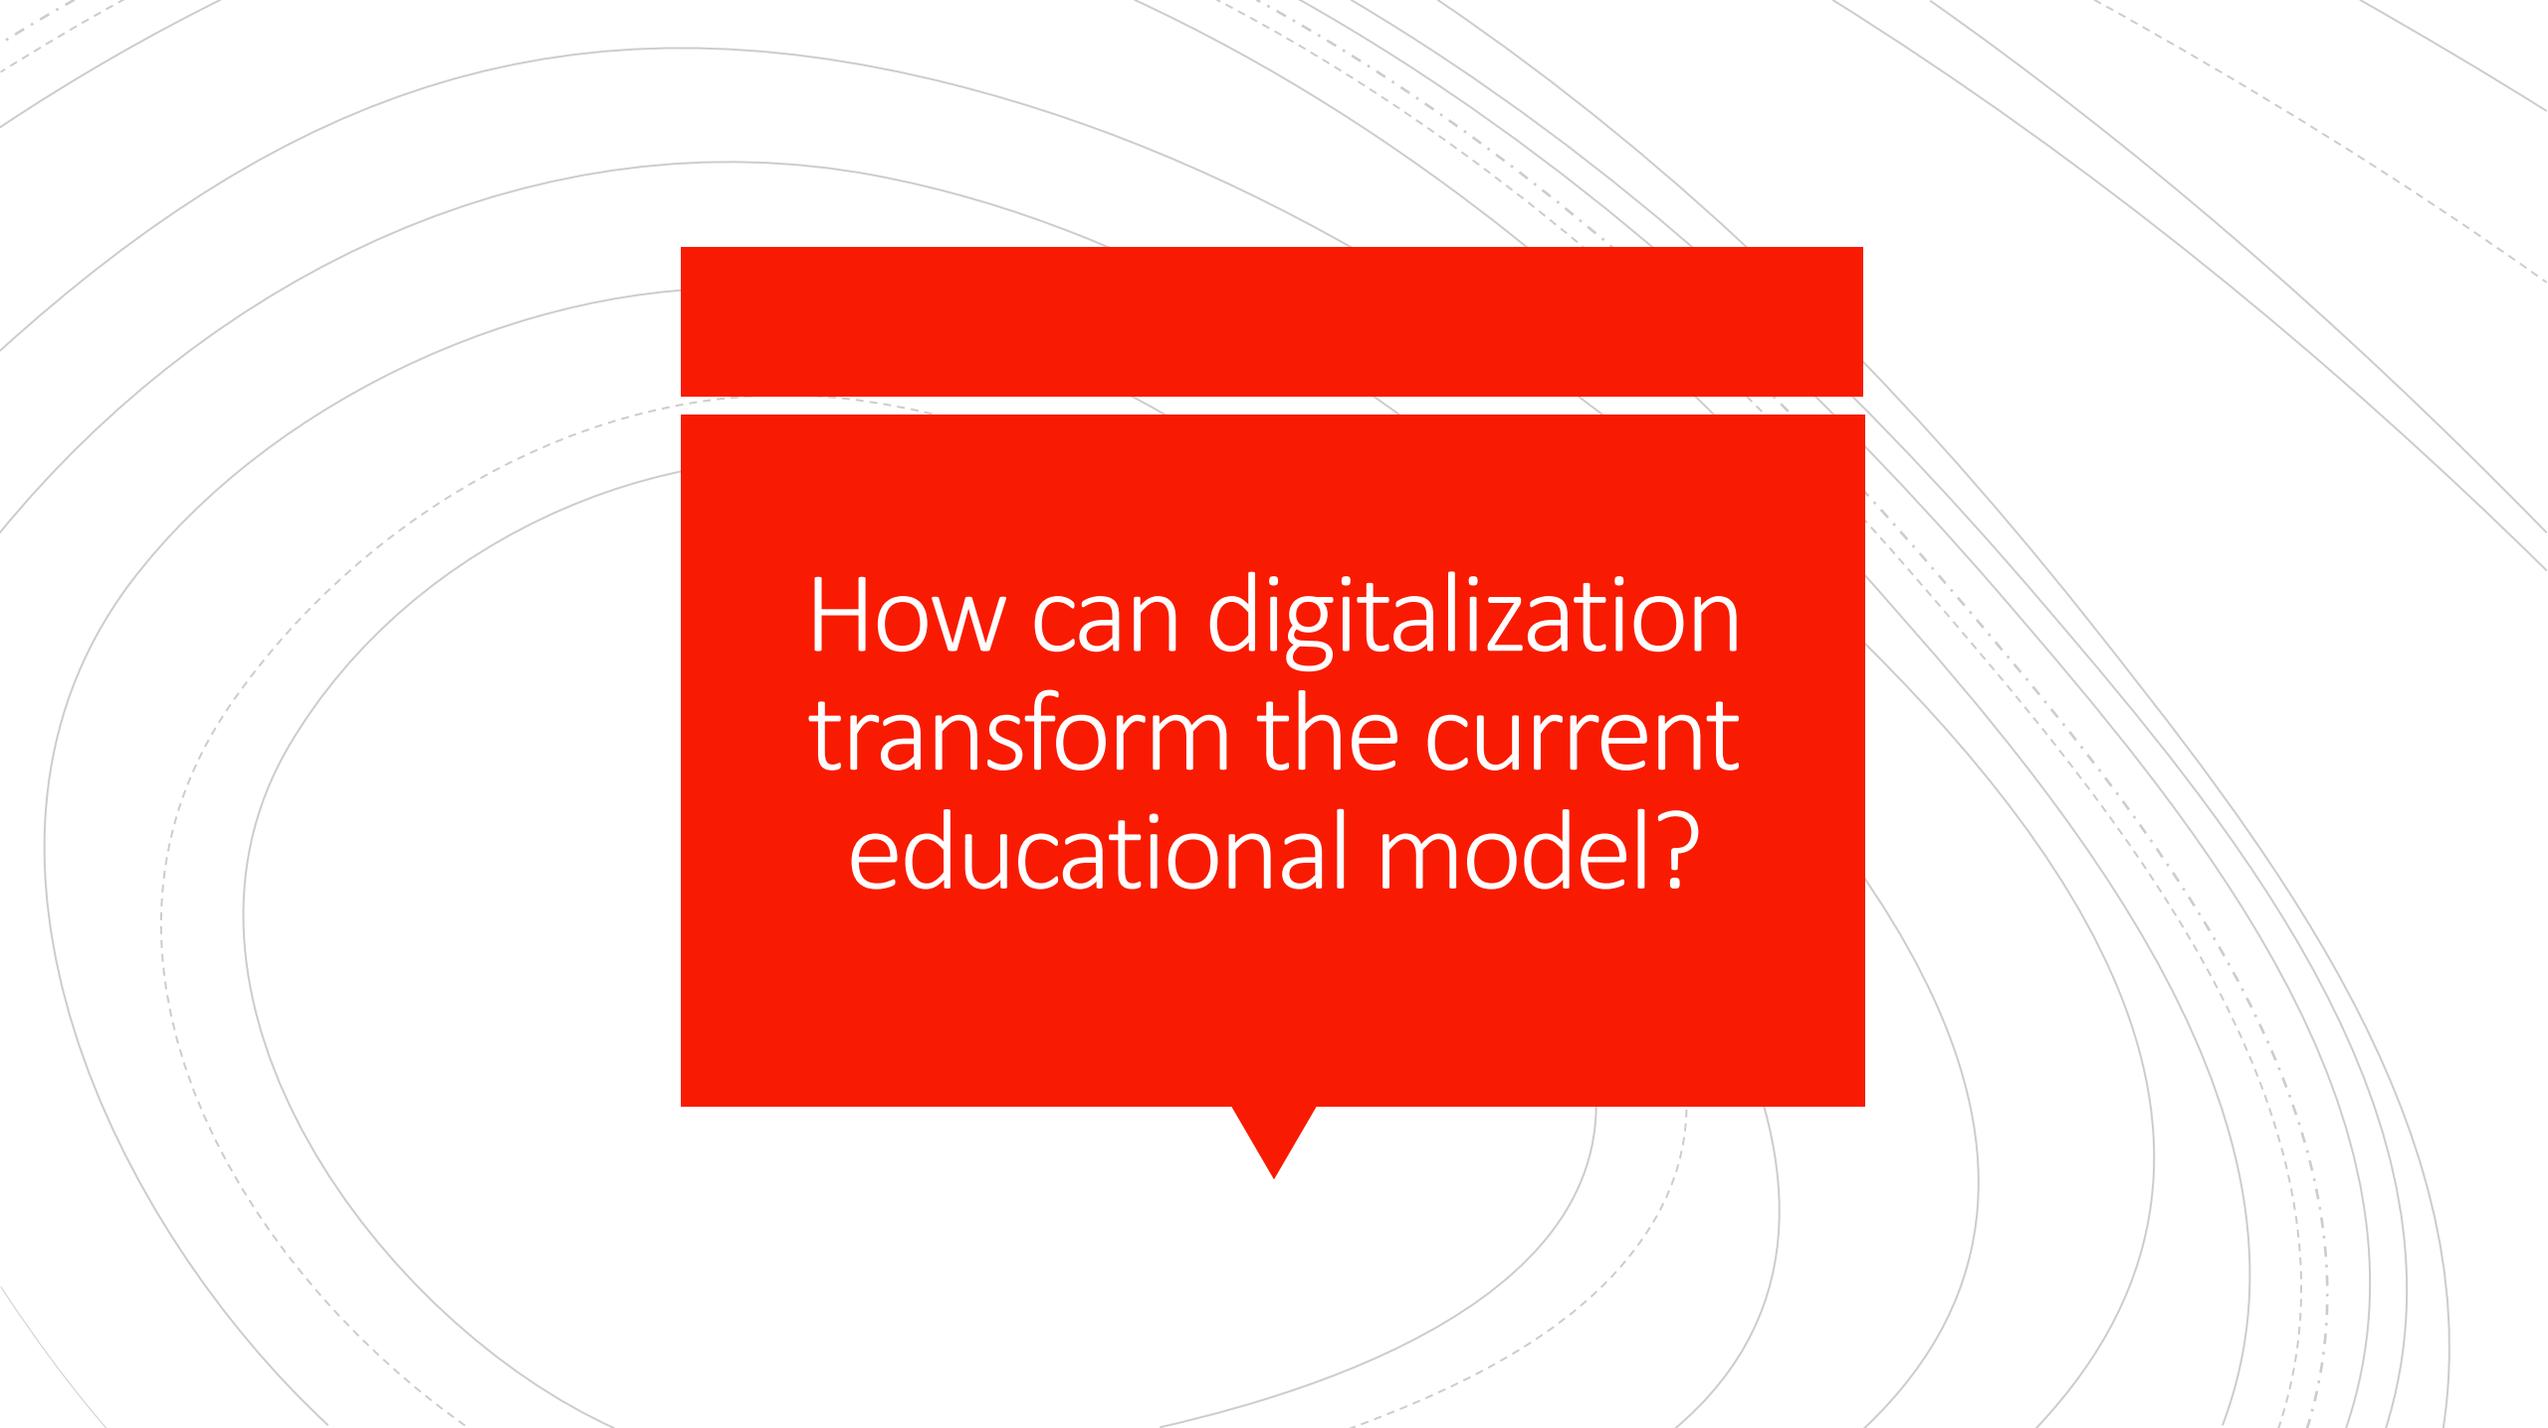

## Education in 20 Years Time

- "From our point of view in 20 years there will be no notebooks, because paper will be extinct. We will have more advanced technology."
- "We also think there will be virtual classes instead of present ones."

Looking in the  
mirror, or into our  
phone cameras ?

Despite technology changing us significantly,  
we are still looking at ourselves in the mirror as  
we have always done traditionally

How can digitalization  
transform the current  
educational model?

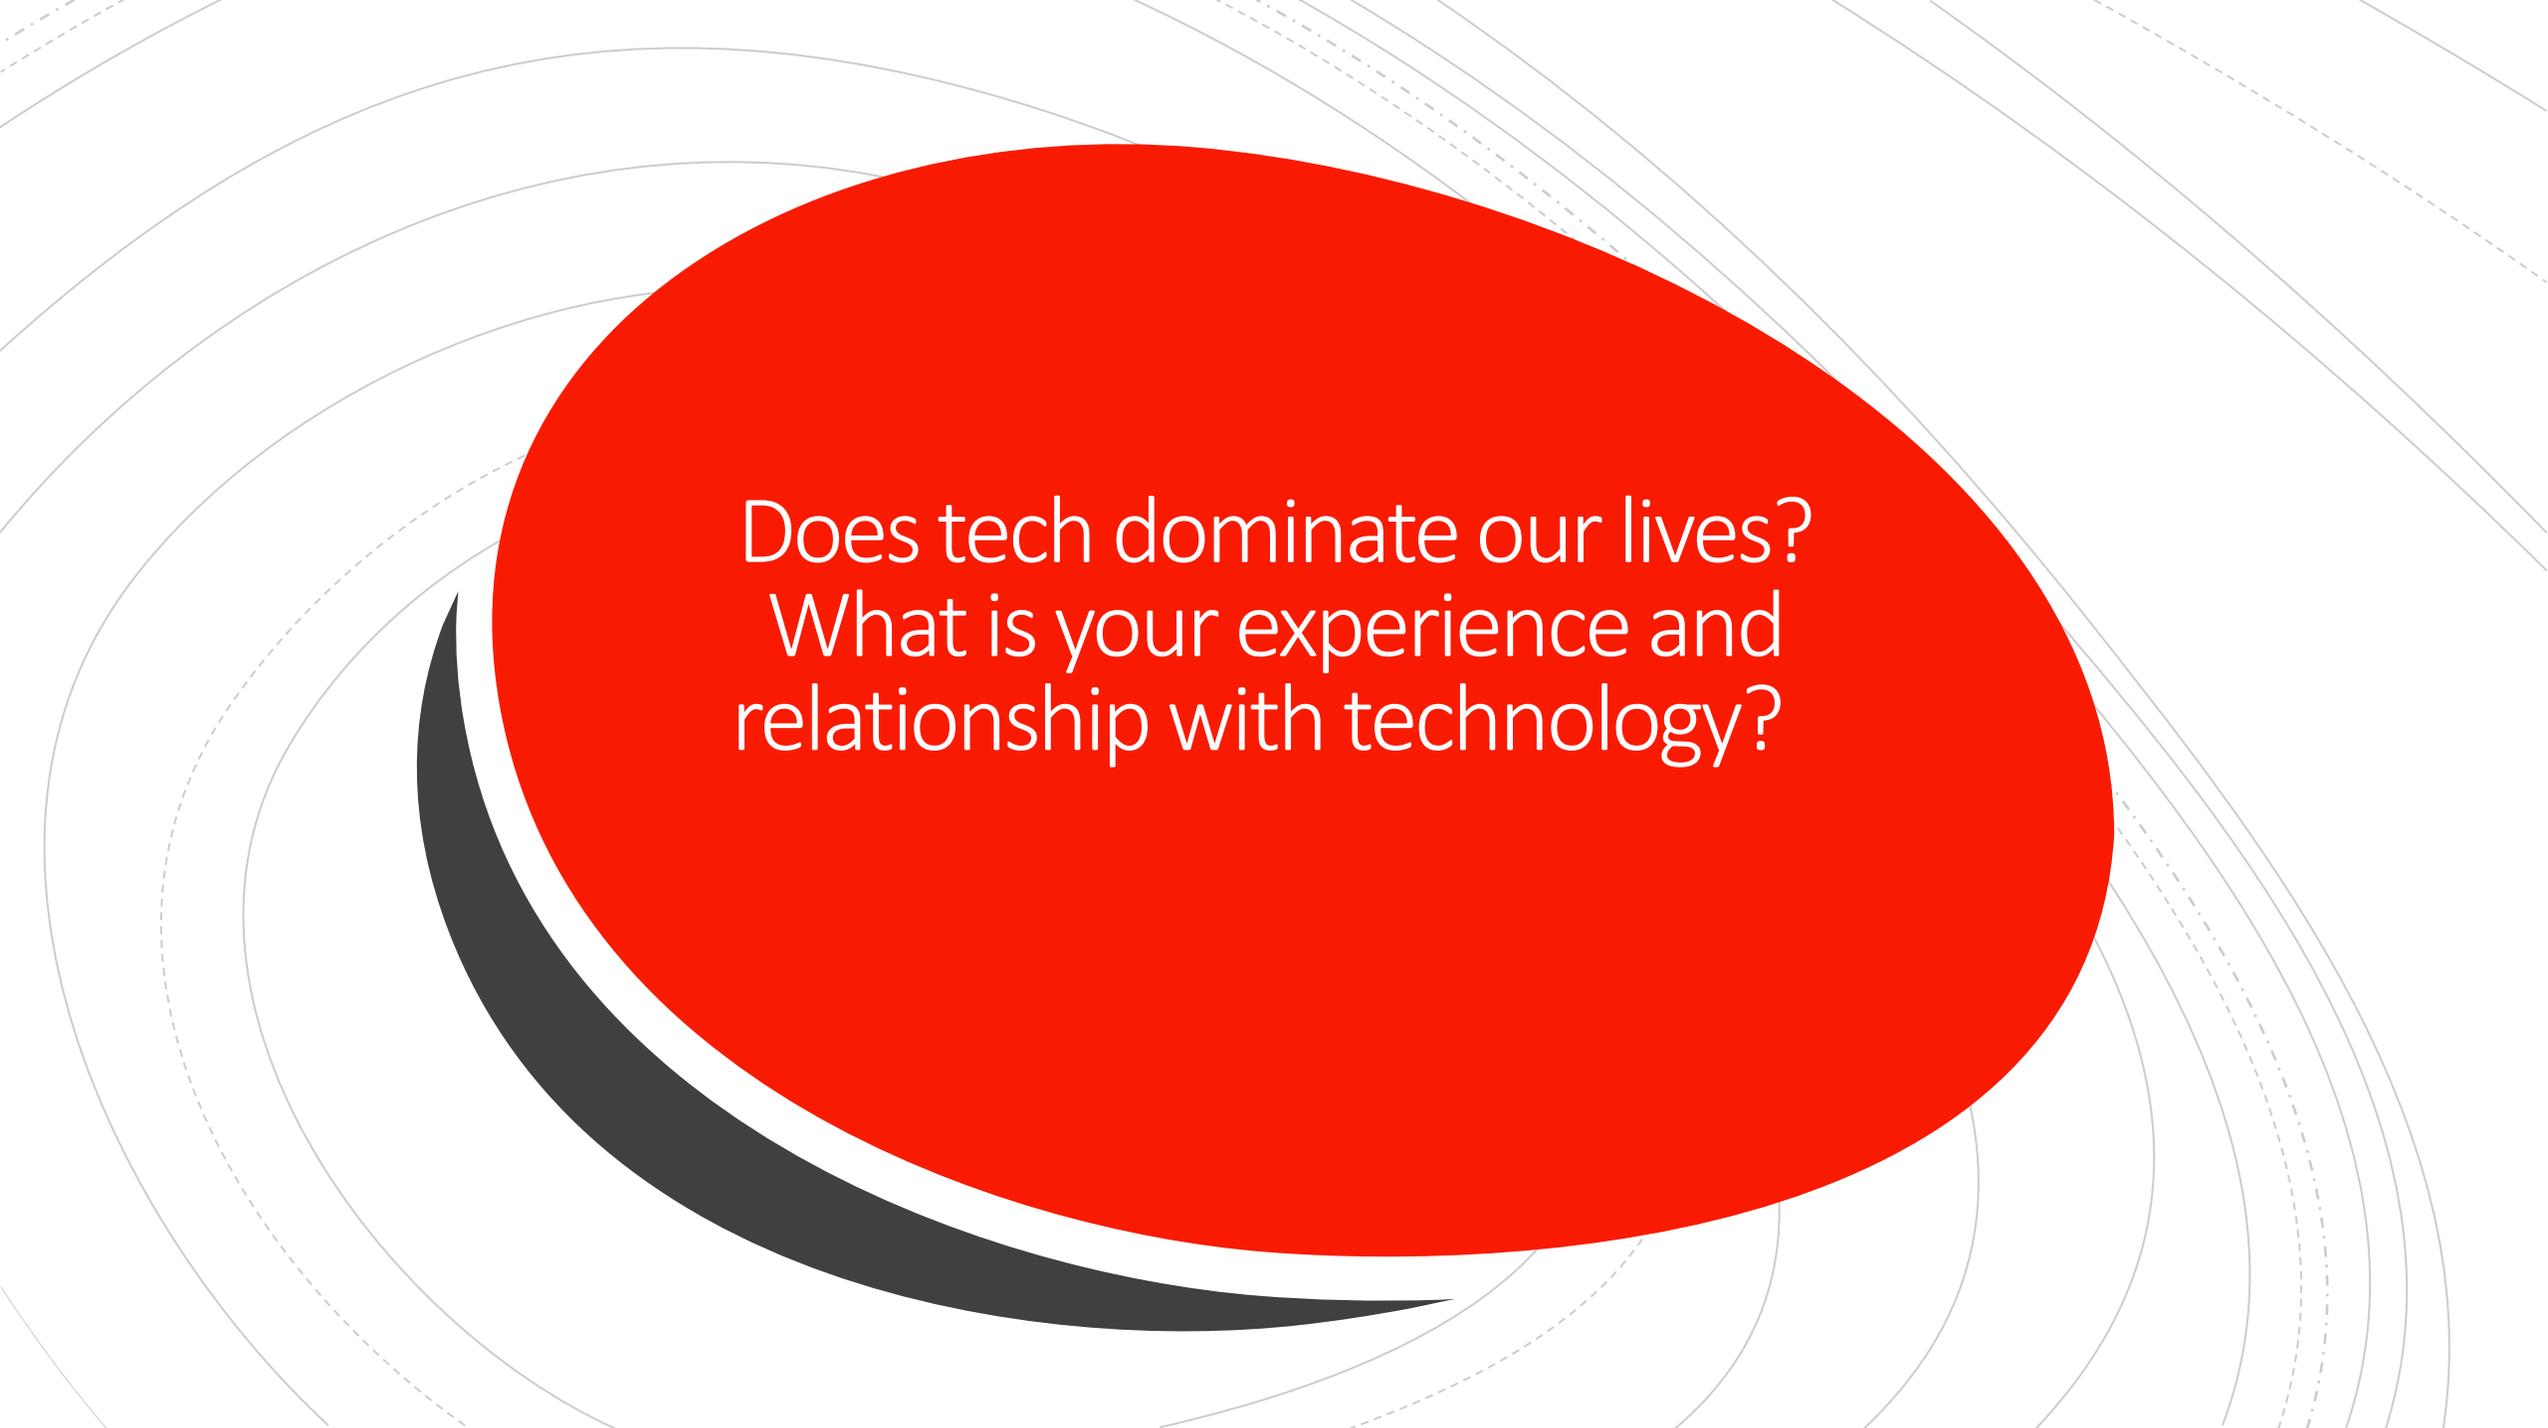

# Advantages of Technology

- It gives us more resources to find information faster.
- We could have digital books, so we have less heavy backpacks. If we don't have paper we don't contaminate the environment.

## Disadvantages of Technology

- It can damage your eyesight
- People misuse it.
- We get distracted when studying or in class.
- It can deteriorate your self-image, because you compare yourself to other people constantly within social media.

Does tech dominate our lives?  
What is your experience and  
relationship with technology?

## Conclusion

- Finally, we consider technology has a lot of advantages as well as disadvantages. We can use technology for searching up many things you want to know, and to do virtual classes. On the other hand technology can damage your eyes and certain people misuse of technology. However we prefer technology than books.
- Digitalization can give us more resources, such as: accessible classes to undeveloped countries or new technology tools to improve the learning process or to make easier the teamwork.
- In conclusion, digitalization will make information and education more accessible and easier for all.
