How can digitalization transform the current education model?

SEK Atlántico International School

Brief answer to the main question:

- **Contrasting sources:** digital education makes it easier to present verified information as it facilitates contrasting sources.
- **Offering different methods:** it gives more importance to practice, rather than theory. In this way, alternative learning methods are developed, increasing the effectivity of education.
- **Making it worldwide:** it gives the opportunity to be connected to many other parts of the globe providing an open-minded perspective.
- **Offering more resources:** digitalizing education will provide students with more tools and resources to make learning easier.

Advantages of digitalization

- It's easier for a person who has a job and can't attend due to business hours.
- People that are sick can study from their houses or hospitals.
- Saves and minimizes paper waste, that in schools is very high.

Advantages of digitalization

A GOOD EDUCATION WITHIN REACH OF ALL POCKETS.

A FLEXIBLE SCHEDULE THAT ADAPTS TO THE SITUATION OF EACH STUDENT.

LESS WE OF TRANSPORT WITH LESS ENVIROMENT IMPACT.

HOW TO IMPROVE SOCIALIZATION AND WORK IN DIGITALIZATION

1

1. Improve teaching methods by doing more interactive activities.

2

2. Methods used by teachers make students more motivated.

3

3. More interactive activities and presentations are organized instead of exams. The final grade is not based on exam results but on the overall year fomenting a change in the evaluation method.

4

4. Diversify levels of subjects in order to make it easier for students with difficulties and different ways of thinking.

5

5. Create organizations that unify and globalise universities, making it possible to share masters or different courses.

Digital evaluation

- Objective evidence: the students will answer briefly or limetedly to clear and concise questions.
- Project realization: after learning the subject and having internalized it, a project would be carried out to evaluate if the knowladge integrated by the student.
- Intercalated questions: questions of various topics would be raised which are designed with a purpose that the subject has been internalized.
- Speakings: exam questions in oral way.

Our process
to think of a
design of the
digital
education of
the future
was...

Research and investigation

Brainstorm of ideas

Discuss the main topics

Think of pros and cons

Get to know different perspectives

Designing the way to communicate our message

Conclusions

- Development of new skills, such as, autonomy and open mind, in order to, succeed.
- The hybrid model came to stay.
- New ways for evaluation assessment.
- Flexible schedule with a wide variety of educational itineraries.
- Worldwide education.
