What does today's university need to be better?

Hello, we think universities are getting obsolete. The society is advancing quickly and universities are not following this new steps. We have some ideas to upgrade nowadays universities. In the first place, we want to introduce cameras to each classroom. The lessons will be recorded everytime a lesson happens, this way students that arent present, can watch it online and continue their studies.

What 3 things should university keep?

As we said, universities are getting obsolete, but some things are not that bad actually, these are the three things we want universities to keep:

1. One thing that we think universities should keep are the presential classes cause its easier to teach and easier for the students to understand. But like we said previously, there's maybe students that can't come and it would be great if there's any recording that they can watch.

2. The second thing we'd like universities to keep is the lunch room/food cause if they remove the food, students will have to pay for the food or for the ingredients that they use to cook. In short, it would be a bad idea if they remove the option of having food in school.

3. In the last place, we want to keep the free material room because if students need any material they would only go to that room and grab what they need. Also, they would not have to waste money in the material.

 Universidad
Camilo José Cela

1. We should, as we said before, add cameras in each classroom, this way online students could continue with their studies.
2. We'd like to add a new online platform to access to all the books and homework so it won't be an excuse for the students that they do not have their homework with them.
3. We'd like to add a new method of learning. This method consists in students to choose between online or presential classes. There will need to be a minimum of presential students.

What 3 things should university eliminate?

1. We'd like to eliminate junk food and replace it with healthy food.
2. We'd like to eliminate classes that are only presential.
3. We'd like to eliminate physical resources and replace them with the online platforms that we mentioned earlier.
