

*How can digitalization transform the
current educational model?*

EMPATHIZE

We followed the design thinking structure, starting with empathizing. We understood the question and brainstormed some ideas in small groups.

Each group organized their ideas into different categories.

After the brainstorm session, all the ideas were reorganized and distributed into four fundamental categories.

IDEATE

Once the four categories were defined, we discussed how digitalization can change the current educational model regarding specifically these four areas.

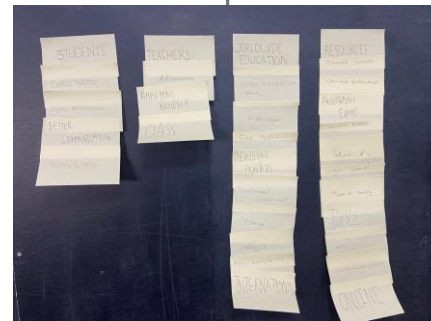

Students

Teachers

Resources

Global interaction

PROTOTYPE

STUDENTS – TEACHERS

Modernise traditional examination methods to motivate students with their achievements

Encourage through digital formats more critical thinking activities

GLOBAL INTERACTION

Promote open mindedness using digital tools to reach other possible participants

Cross cultural connectivity among youth. Get students to contact others from all over the planet

RESOURCES

Government and NGOs intervention = Implementation of technology in the classrooms

The whole group came together to decide which answers were the most impacting and we selected the following. We truly hope our ideas will create an impact and give inspiration to improve our educational model both digitally as well as traditionally.
